

# Oyaah Carbon Reduction Plan September 2023

## Commitment to achieving Net Zero

Oyaah is committed to achieving Net Zero emissions by 2050.

## Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions.

Baseline emissions are the reference point against which emissions reduction can be measured.

<b>Baseline Year: 2023</b>	
<b>Additional Details relating to the Baseline Emissions calculations.</b>	
<p>Oyaah is a Logistic startup, focused on delivering goods in theUK. This is the first presentation of the Carbon Reduction Plan, according to the first calculation of the carbon footprint. In consequence, the values of the baseline year coincide with the actual period presented.</p> <p>It is important to say that the company has only teleworking employees, without any office or warehouse, so it does not buy electricity directly. As a result, the scope 2 results zero.</p> <p>As a startup, the size and activity level of the company is changing quickly. Therefore, the emissions could change significantly in following years as consequence of activity growth.</p>	
<b>Baseline year emissions:</b>	
<b>EMISSIONS</b>	<b>TOTAL (tCO<sub>2</sub>e)</b>
Scope 1	9,65
Scope 2	0
Scope 3 (Included Sources)	1,68 - Teleworking employees (electricity and heating)
<b>Total Emissions</b>	<b>11,33</b>

## Current Emissions Reporting

Reporting Year: 2023	
EMISSIONS	TOTAL (tCO <sub>2</sub> e)
Scope 1	9,65
Scope 2	0
Scope 3 (Included Sources)	1,68 - Teleworking employees (electricity and heating)
Total Emissions	11,33

### Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets:

- Implementing 100% teleworking when possible.
- Replacement of the diesel vehicles to electric vehicles.

We project that carbon emissions (if the company structures stays similar) will decrease over the next five years to 4.36 tCO<sub>2</sub>e by 2028. This is a reduction of 62% respect the baseline year.

Progress against these targets can be seen in the graph below:

## Carbon Reduction Projects

In the future we hope to implement further measures such as:

In order to achieve GHGs emissions reduction, Oyaah will replace the type of vehicles used nowadays (diesel vans) with fully electric vehicles by 2028.

With the current structure, this would lead to a total emissions value of 4 355 kgCO<sub>2</sub>e, leading to a reduction of 62% of the emissions.

As the remaining emissions are associated with electric consumption, the rest of the carbon footprint would be reduced in accordance with the changes in the national generating system to a greener grid.

## Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard<sup>1</sup> and uses the appropriate Government emission conversion factors for greenhouse gas company reporting<sup>2</sup>.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard<sup>3</sup>.
